Electronic Door Lock Indication Lights

If your door lights blink green, the door should open with no problem

If your door lights blink green/yellow together, the door should open with no problem. Your time left on the key may be expiring soon. Report to team office to get it reset.

If your door lights blink green/red together, the door battery is dying. Please report the problem to your barracks manager. Your battery will die in about 2 weeks.

If your door lights blink yellow, you are at the wrong room door or at the wrong building. If there is a fast blinking yellow light, you have been locked out.

If your door lights blink red, you have waited too long to report this problem and your battery is now dead. A work order will have to be submitted to have the battery replaced.
