

Medical Waste Cleanup

DPW responded to a call from our game wardens that medical wastes had been discovered in a NFH training area during the evening of 20 Mar 2014. When the medical staff at CRDAMC finally determined that they could not take responsibility for cleaning up and disposing of those wastes, DPW ENV and BOID personnel worked late into Friday evening on March 21st to arrange for a licensed contractor to perform the cleanup the next morning. They cooperated with CID & FBI investigations of the dump site and quickly got TA300 back open for military training and recreational use.
